| 16. Abstract Our September trip to Nicaragua was very helpful to put this investigation into perspective. Part of the area sampling frame was finished for Nicaragua, but there are sections of Nicaragua that have no current photography. It is in these areas where LANDSAT data could have an impact. To date, no imagery is available, however, this is the season when it is possible to obtain good imagery. | | | |

The Pacific coast of Nicaragua is the most established and most populated areas in Nicaragua. In most of this area, aerial photography is available and current.

From the middle of the country, east to the Atlantic, the situation is different - less populated, less agriculture, not photographed, and changing rapidly. This area is now important and we do not have imagery. No work will be done until imagery is available for this area.

We are setting up a sampling frame in Bolivia and LANDSAT data is now present. Data will be obtained and used there. We will report progress of that project if it occurs before progress on the other project occurs.
